Nucleic Acid Chemistry . To understand how nucleic acids function, we must understand their chemical properties as well as their structures. DNA functions well as a repository of genetic information in part because of its inherent stability.

### **Chapter 12 : Nucleotides and Nucleic Acids**

Paul Andersen introduces the nucleic acids of life; RNA and DNA. He details the history of DNA from Griffith, to Avery, to Hershey and finally to Watson and Crick.

6.1 Introduction. DNA analysis is, after immunofluorescence, the second most important application of flow cytometry. By measuring the DNA content of individual cells, we obtain information about their ploidy (see Section 6.3), of particular relevance in tumours, and, for a population, the distribution of cells across the cell cycle.

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds.
