Conceptually, an ideal current mirror is simply an ideal current amplifier with a gain of -1. In Chapter 8 we explored the transistor and you should recall that the BJT device is a current amplifier of sorts (current controlled current source) in that the collector current is β times the base current.

The Book of Daniel is a 2nd-century BC biblical apocalypse combining a prophecy of history with an eschatology (a portrayal of end times) which is both cosmic in scope and political in its focus. In more mundane language, it is "an account of the activities and visions of Daniel, a noble Jew exiled at Babylon," its message being that just as ...
